# 2. CARBON NEUTRAL INFORMATION

#### **Description of certification**

This carbon neutral certification is for the business operations of Jolt Charge Pty Ltd (JOLT), ABN 31 627 377 780 over the financial year 2021-22.

#### **Organisation description**

JOLT is an Electric Vehicle (EV) charge point operator, currently operating DC fast charging networks in both Sydney and Adelaide. JOLT also own and operate Out of Home (OOH) digital advertising network. JOLT was established in 2018, and aim to accelerate the shift to shared e-mobility, with provision of free, fast, clean public charging in urban areas. JOLT removes the top consumer barriers to e-mobility transport adoption: range anxiety, limited public charging infrastructure, and high EV ownership costs.

As at 30 June 2022 JOLT's Australian EV fast charging network is growing quickly. JOLT's team is working out of a premises located at the Barangaroo precinct and is made up of 18 full-time people and is rapidly increasing.

JOLT Australia operate under the following trading name for the purpose of the organisation standard.

• JOLT Charge Pty Ltd (ABN 31 627 377 780).

"Certification under Climate Active substantiates our commitment to make our cities cleaner and pioneer the shift to a zeroemissions future"

# **3.EMISSIONS BOUNDARY**

#### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

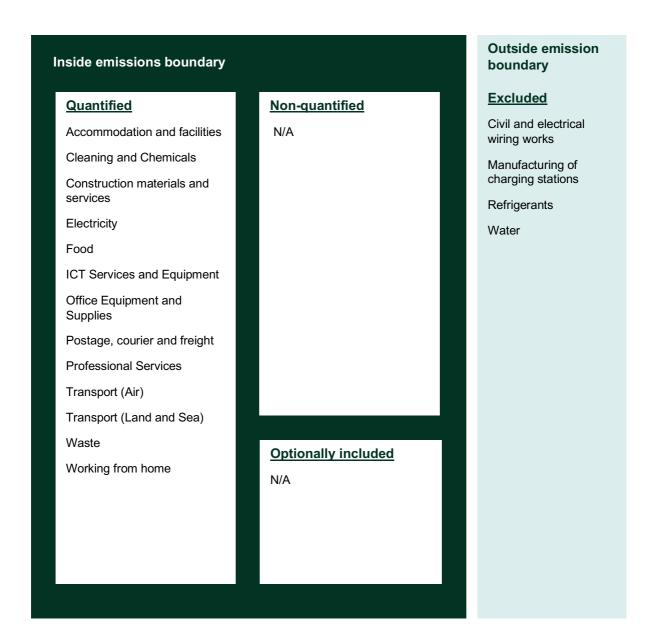

**Quantified emissions** have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the certified entity, however are **optionally included**.

**Non-quantified emissions** have been assessed as relevant and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

## Outside the emissions boundary

**Excluded emissions** are those that have been assessed as not relevant to an organisation's or precinct's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

## Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

# **4.EMISSIONS REDUCTIONS**

#### **Emissions reduction strategy**

JOLT is built on sustainable principles, from the ground up and is committed to reducing the carbon emissions footprint to effect positive change.

Our goal is to enable adoption of reduced-emission transport across Australia and promote carbon free media activity that will have a positive impact on the community.

For our own organisation we intend to implement emission reduction steps below,

By 2026, we aim to

- Maintain renewable electricity use at 100% on our network for every year
- Ensure charging station's useful life continue to be 10 years or more
- Ensure our office buildings are environmentally efficient by occupying modern buildings with a NABERS rating of 5 or more and maintain 100% renewable electricity use
- Maintain strategic partnerships with key organisations focussed on delivering a more sustainable future.

Scope 3 reductions initiatives

- Reduce Scope 3 Transport (Land and Sea) emissions from car rental and road transport by 100% from the rental of electric vehicles and partnering with low emission transport providers
- Reduce Scope 3 Transport (Air) emissions by implementing a policy to ensure that flights are offset at point of purchase
- Implement a travel management system that will lead to improved accuracy of Scope 3 emissions data from business travel.

# 5. EMISSIONS SUMMARY

## Use of Climate Active carbon neutral products and services

N/A

## **Organisation emissions summary**

The electricity summary is available in the Appendix B. Electricity emissions were calculated using a market-based approach.

| Emission category                    | Sum of<br>Scope 1<br>(tCO <sub>2</sub> -e) | Sum of<br>Scope 2<br>(tCO <sub>2</sub> -e) | Sum of<br>Scope 3<br>(tCO <sub>2</sub> -e) | Sum of total<br>emissions<br>(tCO <sub>2</sub> -e) |
|--------------------------------------|--|--|--|--|

# APPENDIX B: ELECTRICITY SUMMARY

Electricity emissions are calculated using a market-based approach.

#### Market-based method

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

| Market Based Approach Summary<br>Market Based Approach | Activity Data | Emissions | Renewable           |
|--|---------------|-----------|---------------------|
| Market Dased Approach                                  | (kWh)         | (kgCO2e)  | Percentage of total |
| Behind the meter consumption of electricity            | _             |           |                     |
| generated  | 0             | 0         | 0%                  |
| Total non-grid electricity                             | 0             | 0         | 0%                  |
| LGC Purchased and retired (kWh)                        |               |           |                     |
| (including PPAs & Precinct LGCs)                       | 828           | 0         | 0%                  |
| GreenPower   | 201,895       | 0         | 89%                 |
| Jurisdictional renewables (LGCs retired)               | 0             | 0         | 0%                  |
| Jurisdictional renewables (LRET) (applied to           |               |           |                     |
| ACT grid electricity)                                  | 0             | 0         | 0%                  |
| Large Scale Renewable Energy Target                    | 10.111        | <u>^</u>  | 100/                |
| (applied to grid electricity only)                     | 42,111        | 0         | 19%                 |
| Residual Electricity                                   | -18,308       | -18,216   | -8%                 |
| Total grid electricity                                 | 226,526       | -18,216   | 100%                |
| Total Electricity Consumed (grid + non                 | 226,526       |           |                     |
| grid)  |               | -18,216   | 108%                |
| Electricity renewables                                 | 244,834       | 0         |                     |
| Residual Electricity                                   | -18,308       | -18,216   |                     |
| Exported on-site generated electricity                 | 0             | 0         |                     |
| Emissions (kgCO2e)                                     |               | 0         |                     |

A minus Residual Electricity Emissions in kgCO2e rounds to zero because the negative emissions can only be used to reduce electricity consumption emissions.

See electricity accounting rules for further information

| Scope 3 Emissions (TCO2e)                                      | 16                     |                               |                               |
| Carbon Neutral electricity offset by<br>Climate Active Product | Activity Data<br>(kWh) | Emissions<br>(kgCO2e)         |                               |
| N/A  | 0                      | 0                             |                               |

Climate Active carbon neutral electricity is not renewable electricity. The emissions have been offset by another Climate Active member through their Product certification.

## APPENDIX C: INSIDE EMISSIONS BOUNDARY

#### Non-quantified emission sources

The following sources emissions have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. They have been non-quantified due to <u>one</u> of the following reasons:

- 1. Immaterial <1% for individual items and no more than 5% collectively
- 2. <u>Cost effective</u> Quantification is not cost effective relative to the size of the emission but uplift applied.
- 3. <u>Data unavailable</u> Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
- 4. Maintenance Initial emissions non-quantified but repairs and replacements quantified.

| Relevant-non-<br>quantified<br>emission<br>sources | (1) Immaterial | (2) Cost effective<br>(but uplift applied) | (3) Data unavailable<br>(but uplift applied &<br>data plan in place) | (4) Maintenance |
|--|----------------|--|--|-----------------|
| N/A  |                |  |  |                 |
|  |                |  |  |                 |

## APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

#### **Excluded emission sources**

The below emission sources have been assessed as not relevant to an organisation's or precinct's operations and are outside of its emissions boundary. These emissions are not part of the carbon neutral claim. Emission sources considered for relevance must be included within the certification boundary if they meet two of the five relevance criteria. Those which only meet one condition of the relevance test can be excluded from the certification boundary.

Emissions tested for relevance are detailed below against each of the following criteria:

- 1. <u>Size</u> The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions
- Influence The responsible entity has the potential to influence the reduction of emissions from a particular source.
- <u>Risk</u> The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.
- 4. Stakeholders Key stakeholders deem the emissions from a particular source are relevant.
- <u>Outsourcing</u> The emissions are from outsourced activities previously undertaken within the organisation's boundary, or from outsourced activities typically undertaken within the boundary for comparable organisations.

Emission sources noted in the table below has been excluded as it has been assessed as not relevant according to the relevance test.

| Emission sources<br>tested for<br>relevance                                 | (1)<br>Size | (2)<br>Influence | (3)<br>Risk | (4)<br>Stakeholders | (5)<br>Outsourcing | Included in boundary? |
