ETHICAL PARTNERS FUNDS MANAGEMENT ORGANISATION CERTIFICATION CY2023

### Australian Government

# Climate Active Public Disclosure Statement

NAME OF CERTIFIED ENTITY	Ethical Partners Funds Management
REPORTING PERIOD	Calendar year 1 January 2023 – 31 May 2023
DECLARATION	To the best of my knowledge, the information provided in this public disclosure statement is true and correct and meets the requirements of the Climate Active Carbon Neutral Standard.  Robyn Parkin
	Robyn Parkin Head of Sustainability 13 October 2023

Public Disclosure Statement documents are prepared by the submitting organisation. The material in the Public Disclosure Statement document represents the views of the organisation and do not necessarily reflect the views of the Commonwealth. The Commonwealth does not guarantee the accuracy of the contents of the Public Disclosure Statement document and disclaims liability for any loss arising from the use of the document for any purpose.

Version March 2023.

## 1.CERTIFICATION SUMMARY

TOTAL EMISSIONS OFFSET	21.55 tCO <sub>2</sub> -e
OFFSETS USED	100% ACCUs
RENEWABLE ELECTRICITY	N/A
CARBON ACCOUNT	Prepared by: Ethical Partners Funds Management
TECHNICAL ASSESSMENT	N/A small organisation certification

### Contents

1.	Certification summary	3
2.	Carbon neutral information	4
	Emissions boundary	
4.	Emissions reductions	7
5.	Emissions summary	8
6.	Carbon offsets	. 10
7. Re	enewable Energy Certificate (REC) Summary	. 12
Арре	endix A: Additional Information	. 13
Арре	endix B: Electricity summary	. 14
Арре	endix C: Inside emissions boundary	. 17
Appe	endix D: Outside emissions boundary	. 18

## 2. CARBON NEUTRAL INFORMATION

### **Description of certification**

The Climate Active certification covers all Ethical Partners Funds Management's (EPFM) (ABN 96 623 475 454) operations. It does not include EPFM's investments.

The inventory has been prepared for the calendar year from 1 January 2023 to 31 May 2023 and covers the business operations.

### **Organisation description**

EPFM is a boutique fund manager based in Sydney managing approximately \$2 billion. EPFM is fully owned by its staff and founders with a dual focus on performance and investing ethically. There are 11 staff members and one small office space in the Sydney CBD.

## 3.EMISSIONS BOUNDARY

This is a small organisation certification, which uses the standard Climate Active small organisation emissions boundary.

### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

**Quantified emissions** have been assessed as relevant and are quantified in the carbon inventory. This may include emissions that are not identified as arising due to the operations of the certified entity, however, are **optionally included**.

**Non-quantified emissions** have been assessed as relevant and are captured within the emissions boundary but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

### Outside the emissions boundary

**Excluded emissions** are those that have been assessed as not relevant to an organisation's operations and are outside of its emissions boundary or are outside of the scope of the certification. These emissions are not part of the carbon neutral claim. Further detail is available at Appendix D.

### Inside emissions boundary

### **Quantified**

- Accommodation and facilities
- Cleaning and Chemicals
- Climate Active Carbon Neutral Products and Services
- Electricity
- Food
- ICT services and equipment
- Office equipment & supplies
- Postage, courier and freight
- Professional services
- Transport (Air)
- Transport (Land and Sea)
- Waste
- Water
- Working from home

### Non-quantified

## Outside emission boundary

### **Excluded**

Investments

### 4. EMISSIONS REDUCTIONS

### **Emissions reduction strategy**

In 2021, Ethical Partners Funds Management committed to reduce emissions across the value chain (Scope 1 and 2) by 100% by 2050 from a 2020 baseline. We also set a target to reduce our operational emissions by 30% by 2030.

As our operational footprint is small, we have focused predominantly on the emissions reduction plans in our investments. This includes a 2050 net zero target for our emissions and an emissions tracking mechanism to ensure we are meeting the annual decrease in the emissions of our investments between now and 2050.

In 2022, we committed to working with our suppliers in a more structured way to reduce their emissions. Over the course of 2022 and 2023 we continued to do so and our six most material suppliers have improved their disclosures and their practices.

### **Emissions reduction actions**

Over the past year, Ethical Partners Funds Management has continued to focus on a range of initiatives to decrease our emissions. These include:

- Purchasing Powershop electricity is one of the key strategies we use to ensure that our electricity is already carbon neutral.
- Being in an office space that is energy efficient is crucial as well. When we moved offices in 2021 this was a key factor in searching for a new space. Grosvenor Place has 4.5 star NABERS Energy, 4.0 star NABERS Water Rating and 5.0 star NABERS IEQ Rating. 100% of the base building electricity supplied by Energy Australia is accredited green power. The complex also has sunshades on the outside, thermal storage to reduce electricity usage, smart meter Technology to manage energy and water usage and solar energy from the rooftop. This solar energy is used in common areas.
- Continuing our recycling initiatives and system in our Grosvenor Place office. This includes paper/cardboard, plastics, glass etc. We also have a specific organic food wastage bin and recycling for takeaway coffee cups. Engagement and usage from staff have been positive and we will continue to ensure these recycling systems are used and improved. Grosvenor Place additionally offers e-waste options, where staff can bring in e-waste from home and also clothing recycling options too. We have continued to use the coffee cup recycling in the office throughout 2023.
- Encouraging staff to use online communications and reporting systems to reduce paper usage and air travel.
- Encouraging staff to take public transport and offering work from home arrangements.

## **5.EMISSIONS SUMMARY**

### **Emissions over time**

		Emissions since base year	
		Total tCO <sub>2</sub> -e (without uplift)	Total tCO <sub>2</sub> -e (with uplift)
Base year:	2020	21.5	22.58
Year 1:	2021	28.98	30.40
Year 2:	2022	128.17	134.58
Year 3:	2023	20.52	21.55

### Significant changes in emissions

This reporting period was only for a short period in 2023 and therefore doesn't represent a full year's worth of emissions. However, the carbon emissions for Ethical Partners Funds Management's operations have mostly decreased dramatically.

Emission source name	Previous year emissions (t CO <sub>2</sub> -e)	Current year emissions (t CO <sub>2</sub> -e)	Detailed reason for change
Transport (Air)  Long and Short Business  Class flights	83.65	3.85	Between Jan and May 2023, there was NO international travel, hence our emissions were reduced significantly.
Accommodation and Facilities	1.26	0.61	Reduction in the accommodation needs due to significantly less travelling for business
ICT Services and Equipment	12.50	1.76	IT cloud migration was completed at the start of 2023 and resulted in a significant and immediate reduction of costs
Electricity	0.29	6.96	In 2023, all staff physically returned to the office 5 days a week which increased the level of electricity consumption for the business as a whole quite significantly.

## Use of Climate Active carbon neutral products, services, buildings or precincts

Certified brand name	Product/Service/Building/Precinct used
Climate Active Purchased Electricity	Powershop electricity

### **Emissions summary**

The electricity summary is available in the Appendix B. Electricity emissions were calculated using a location-based approach.

Emission category	Sum of Scope 1 (t CO2-e)	Sum of Scope 2 (t CO2-e)	Sum of Scope 3 (t CO2-e)	Sum of Total Emissions (t CO2-e)
Accommodation and facilities	0.00	0.00	0.61	0.61
Cleaning and Chemicals Climate Active Carbon Neutral	0.00	0.00	0.15	0.15
Products and Services	0.00	0.00	0.00	0.00
Electricity	0.00	6.43	0.53	6.96
Food	0.00	0.00	0.49	0.49
ICT services and equipment	0.00	0.00	1.76	1.76
Office equipment & supplies	0.00	0.00	0.45	0.45
Postage, courier and freight	0.00	0.00	0.09	0.09
Professional Services	0.00	0.00	1.99	1.99
Transport (Air)	0.00	0.00	3.85	3.85
Transport (Land and Sea)	0.00	0.00	3.93	3.93
Waste	0.00	0.00	0.05	0.05
Water	0.00	0.00	0.15	0.15
Working from home	0.00	0.00	0.04	0.04
Total	0.00	6.43	14.09	20.52

### **Uplift factors**

An uplift factor is an upwards adjustment to the total carbon inventory to account for relevant emissions that cannot be reasonably quantified or estimated. This conservative accounting approach helps ensure the integrity of the carbon neutral claim.

Reason for uplift factor	tCO₂-e
Mandatory 5% uplift for small organisations	1.03
Total of all uplift factors	1.03
Total emissions footprint to offset (total emissions from summary table + total of all uplift factors)	21.55

## 6.CARBON OFFSETS

### Offsets retirement approach

This certification has taken an in-arrears offsetting approach. The total emission to offset is 21.55 t CO<sub>2</sub>-e. The total number of eligible offsets used in this report is 22. Of the total eligible offsets used, zero were previously banked and 22 were newly purchased and retired. Zero are remaining and have been banked for future use.

## Eligible offsets retirement summary

Offsets retired for Climate Active Carbon Neutral Certification											
Project description	Type of offset units	Registry	Date retired	Serial number (and hyperlink to registry transaction record)	Vintage	Stapled quantity	Eligible quantity retired (tCO <sub>2</sub> -e)	Eligible quantity used for previous reporting periods	Eligible quantity banked for future reporting periods	Eligible quantity used for this reporting period	Percentage of total (%)
Raak Nguunge	ACCU	ERF	10 October 2023	8,344,038,637 - 8,344,038,658	2021-22		22	0	0	22	100%
Total eligible offsets retired and u								sed for this report	22		
Total eligible offsets retired this report and banked for use in future reports							0				

Type of offset units	Eligible quantity (used for this reporting period)	Percentage of total
Australian Carbon Credit Units (ACCUs)	22	100%

## 7. RENEWABLE ENERGY CERTIFICATE (REC) SUMMARY

Renewable Energy Certificate (REC) summary

N/A

### APPENDIX B: ELECTRICITY SUMMARY

There are two international best-practice methods for calculating electricity emissions – the location-based method and the market-based method. Reporting electricity emissions under both methods is called dual reporting.

Dual reporting of electricity emissions is useful, as it provides different perspectives of the emissions associated with a business's electricity usage.

#### Location-based method:

The location-based method provides a picture of a business's electricity emissions in the context of its location, and the emissions intensity of the electricity grid it relies on. It reflects the average emissions intensity of the electricity grid in the location (State) in which energy consumption occurs. The location-based method does not allow for any claims of renewable electricity from grid-imported electricity usage.

### Market-based method:

The market-based method provides a picture of a business's electricity emissions in the context of its renewable energy investments. It reflects the emissions intensity of different electricity products, markets and investments. It uses a residual mix factor (RMF) to allow for unique claims on the zero emissions attribute of renewables without double-counting.

For this certification, electricity emissions have been set by using the **location-based approach**.

Market-based approach summary			
Market-based approach	Activity Data (kWh)	Emissions (kg CO <sub>2</sub> -e)	Renewable percentage of total
Behind the meter consumption of electricity generated	0	0	0%
Total non-grid electricity	0	0	0%
LGC Purchased and retired (kWh) (including PPAs)	0	0	0%
GreenPower	8,806	0	75%
Climate Active precinct/building (voluntary renewables)	0	0	0%
Precinct/Building (LRET)	0	0	0%
Precinct/Building jurisdictional renewables (LGCS surrendered)	0	0	0%
Electricity products (voluntary renewables)	0	0	0%
Electricity products (LRET)	0	0	0%
Electricity products jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LGCs surrendered)	0	0	0%
Jurisdictional renewables (LRET) (applied to ACT grid electricity)	0	0	0%
Large Scale Renewable Energy Target (applied to grid electricity only)	1,641	0	14%
Residual Electricity	1,319	1,259	0%
Total renewable electricity (grid + non grid)	10,447	0	89%
Total grid electricity	11,766	1,259	89%
Total electricity (grid + non grid)	11,766	1,259	89%
Percentage of residual electricity consumption under operational control	100%	1,200	
Residual electricity consumption under operational control	6,211	5,932	
Scope 2	5,485	5,238	
Scope 3 (includes T&D emissions from consumption under operational control)	726	693	
Residual electricity consumption not under operational control	0	0	
Scope 3	0	0	

Total renewables (grid and non-grid)	88.79%
Mandatory	13.95%
Voluntary	74.84%
Behind the meter	0.00%
Residual scope 2 emissions (t CO <sub>2</sub> -e)	1.11
Residual scope 3 emissions (t CO <sub>2</sub> -e)	0.15
Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO <sub>2</sub> -e)	0.00
Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO <sub>2</sub> -e)	0.00
Total emissions liability (t CO <sub>2</sub> -e)	0.00
Figures may not sum due to rounding. Renewable percentage can be above 100%	

Location-based approach	based approach summary  sed approach  Data (kWh) total					Not under operational control		
Percentage of grid electricity consumption under operational control	100%	(kWh)	Scope 2 Emissions (kgCO <sub>2</sub> -e)	Scope 3 Emissions (kgCO <sub>2</sub> -e)	(kWh)	Scope 3 Emissions (kgCO <sub>2</sub> -e)

Residual scope 3 emissions (t CO²-e)	0.71
Scope 2 emissions liability (adjusted for already offset carbon neutral electricity) (t CO <sub>2</sub> -e)	6.43
Scope 3 emissions liability (adjusted for already offset carbon neutral electricity) (t CO <sub>2</sub> -e)	0.53
Total emissions liability	6.96

Climate Active carbon neutral electricity products

Chimate Active carbon heatral electricity products		
Climate Active carbon neutral product used	Electricity claimed from	Emissions
	Climate Active electricity	(kg CO₂-e)
	products (kWh)	
Powershop Electricity	2,960	0

Climate Active carbon neutral electricity is not renewable electricity. These electricity emissions have been offset by another Climate Active member through their electricity product certification. This electricity consumption is also included in the market based and location-based summary tables. Any electricity that has been sourced as renewable electricity by the electricity product under the market-based method is outlined as such in the market based summary table.

## APPENDIX C: INSIDE EMISSIONS BOUNDARY

### Non-quantified emission sources

The following emissions sources have been assessed as relevant, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. They have been non-quantified due to <u>one</u> of the following reasons:

- 1. Immaterial <1% for individual items and no more than 5% collectively
- 2. Cost effective Quantification is not cost effective relative to the size of the emission but uplift applied.
- 3. <u>Data unavailable</u> Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
- 4. Maintenance Initial emissions non-quantified but repairs and replacements quantified.

### Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

## APPENDIX D: OUTSIDE EMISSIONS BOUNDARY

### **Excluded emission sources**

The below emission sources have been assessed as not relevant to this organisation's operations and are outside of its emissions boundary. These emissions are not part of the carbon neutral claim. Emission sources considered for relevance must be included within the certification boundary if they meet two of the five relevance criteria. Those which only meet one condition of the relevance test can be excluded from the certification boundary.

Emissions tested for relevance are detailed below against each of the following criteria:

- <u>Size</u> The emissions from a particular source are likely to be large relative to the organisation's electricity, stationary energy and fuel emissions.
- 2. <u>Influence</u> The responsible entity has the potential to influence the reduction of emissions from a particular source.
- 3. **Risk** The emissions from a particular source contribute to the organisation's greenhouse gas risk exposure.
- 4. Stakeholders Key stakeholders deem the emissions from a particular source are relevant.
- Outsourcing The emissions are from outsourced activities previously undertaken within the
  organisation's boundary, or from outsourced activities typically undertaken within the boundary for
  comparable organisations.

### **Excluded emissions sources summary**

Emission sources tested for relevance	Size	Influence	Risk	Stakeholders	Outsourcing	Justification
Investments	Υ	N	N	N	N	Size: The emissions from Ethical Partners' investments (scope 3) is very large in comparison to our own operations.
