### Description of product certification

This public disclosure statement supports the carbon neutral product certification for the supply and installation of Energy Efficient Light Fixtures provided by Sustainable Business Energy Solutions Pty Ltd (trading as AGL Energy Solutions) (a subsidiary of AGL Energy Limited (**AGL**)) and its contractor partners. This includes the Life Cycle Assessment of the Light Fixture Product and quantification of Scope 1, 2 and 3 emissions associated with the retail operations component. The emissions reported here are for CY2023 which is the third year of certification. Since June 2021, AGL has offered a certified Carbon Neutral Energy Efficient Light Fixture product to small business and commercial and industrial (C&I) customers of AGL, with a requirement to opt-in from 1 July 2022.

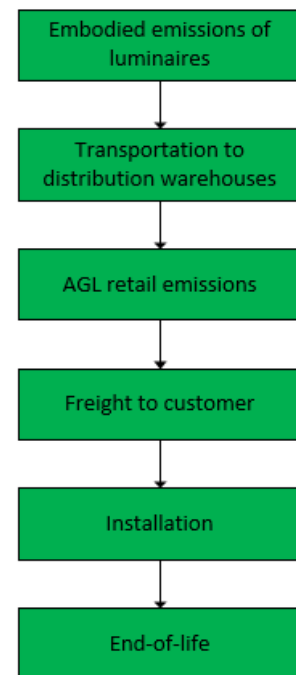

'Energy Efficient Light Fixtures' are a product that reduces the amount of energy required for commercial lighting applications. The Carbon Neutral certification includes all components and services associated with the supply and installation of Energy Efficient Light Fixtures.

#### Scope

- Functional unit: kgCO<sub>2</sub>-e/Watt installed will be used as a quantifiable reference to the associated greenhouse gas emissions of the Energy Efficient Light Fixture product.
- Offered as: Opt-in product
- Life cycle: cradle-to-grave

The responsible entity for this product certification is AGL Energy Limited, ABN 74115061375

This Public Disclosure Statement includes information for CY2023 reporting period.

*Process map for Lighting*

### Organisation description

AGL is a leading integrated essential service provider, with a proud history of innovation. AGL is committed to providing our customers simple, fair and accessible essential services as they decarbonise and electrify the way they live, move and work. We deliver around 4.3 million customer services across energy and telecommunications to our residential, small and large business, and wholesale customers across Australia. We operate the largest electricity generation portfolio in Australia, with an operated generation capacity of 8,735 MW (as at 30 June 2023)<sup>1</sup>. AGL's operated generation accounted for

<sup>1</sup> Capacity as at 30 June 2023. <https://www.agl.com.au/content/dam/digital/agl/documents/about-agl/investors/2023/230810-agl-energy-limited-annual-report-2023-4-4-asx.pdf>

approximately 20% of the total generation within the National Electricity Market in FY23. AGL operates the largest renewable and storage portfolio of any ASX-listed company, as at 30 June 2023.

AGL includes related bodies, such as: Data and telecommunications provider Southern Phone Company Limited, which trades as AGL Telecommunications and as Southern Phone Company and sells telecommunications products under both brands.

- Southern Phone Company is one of the largest providers of fixed line, mobile and Internet communications services in regional Australia. Formed in 2002 with a vision to provide regional communities with affordable telecommunications services, Southern Phone Company now serves a national customer base, and operates out of its metropolitan and regional offices.
- AGL Telecommunications launched its first telecommunications products, offering internet services, in November 2020. This was followed by its launch of mobile SIM plans in February 2021.
- New energy providers - AGL Energy Services Pty Ltd sells energy solutions to residential customers based in Queensland, New South Wales, Victoria and South Australia, including solar and battery bundles and battery storage solutions. Sustainable Business Energy Solutions Pty Ltd (trading as AGL Energy Solutions) sells energy solutions to business customers including solar, battery storage, stand-alone power systems, energy efficient lighting and Power Factor Correction. It operates in all Australian states and territories and offers an end-to-end design, project management and installation service for all energy solutions sold.
- Energy retailers – AGL Sales Pty Limited; AGL South Australia Pty Limited; AGL Retail Energy Limited (“AGL energy retail entities”) and Perth Energy Pty Ltd.
  - AGL energy retail entities provide gas and electricity services to residential and business customers across New South Wales, Victoria, South Australia, Queensland and Western Australia. Offering a range of energy plans to suit varying preferences, customers can sign up to our products and services via our digital channels (AGL website, AGL app, My Account) or by calling the AGL contact centre.
  - AGL | Perth Energy supplies contestable gas and electricity business customers connected to the Western Power and ATCO gas networks in Western Australia including regional areas such as Albany, Geraldton and Kalgoorlie for electricity, and Geraldton for gas.
  - The accelerating pace of the climate transition, along with the shaping forces of customers, the community and technology, has led to significant changes to the landscape in which AGL operates.

## 3. EMISSIONS BOUNDARY

### Inside the emissions boundary

All emission sources listed in the emissions boundary are part of the carbon neutral claim.

**Quantified** emissions have been assessed as 'attributable processes' of a product or service. These attributable processes are services, materials and energy flows that become the product or service, make the product or service and carry the product or service through its life cycle. These attributable emissions have been quantified in the carbon inventory.

**Non-quantified** emissions have been assessed as attributable and are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. All material emissions are accounted for through an uplift factor. Further detail is available at Appendix C.

### Outside the emissions boundary

**Non-attributable** emissions have been assessed as not attributable to a product or service. They can be **optionally included** in the emissions boundary and therefore have been offset, or they can be listed as outside of the emissions boundary (and are therefore not part of the carbon neutral claim). Further detail is available at Appendix D.

## Inside emissions boundary

### Quantified Product

Embodied emissions of LED lights, product packaging

Freight to Australia

Fuel used in transport for install

End of life emissions in product disposal

### Quantified Retail

Electricity incl. base building

Professional services

ICT services and equipment

Cleaning and chemicals

Office supplies and services

Postage, courier and logistics

Travel expenses

Machinery and vehicles

Construction materials and construction

Transport (air)

Transport (land and sea)

Accommodation

Food & beverage

Waste

Water

Employee commute

Working from home

### Non-quantified

N/A

### Optionally included

N/A

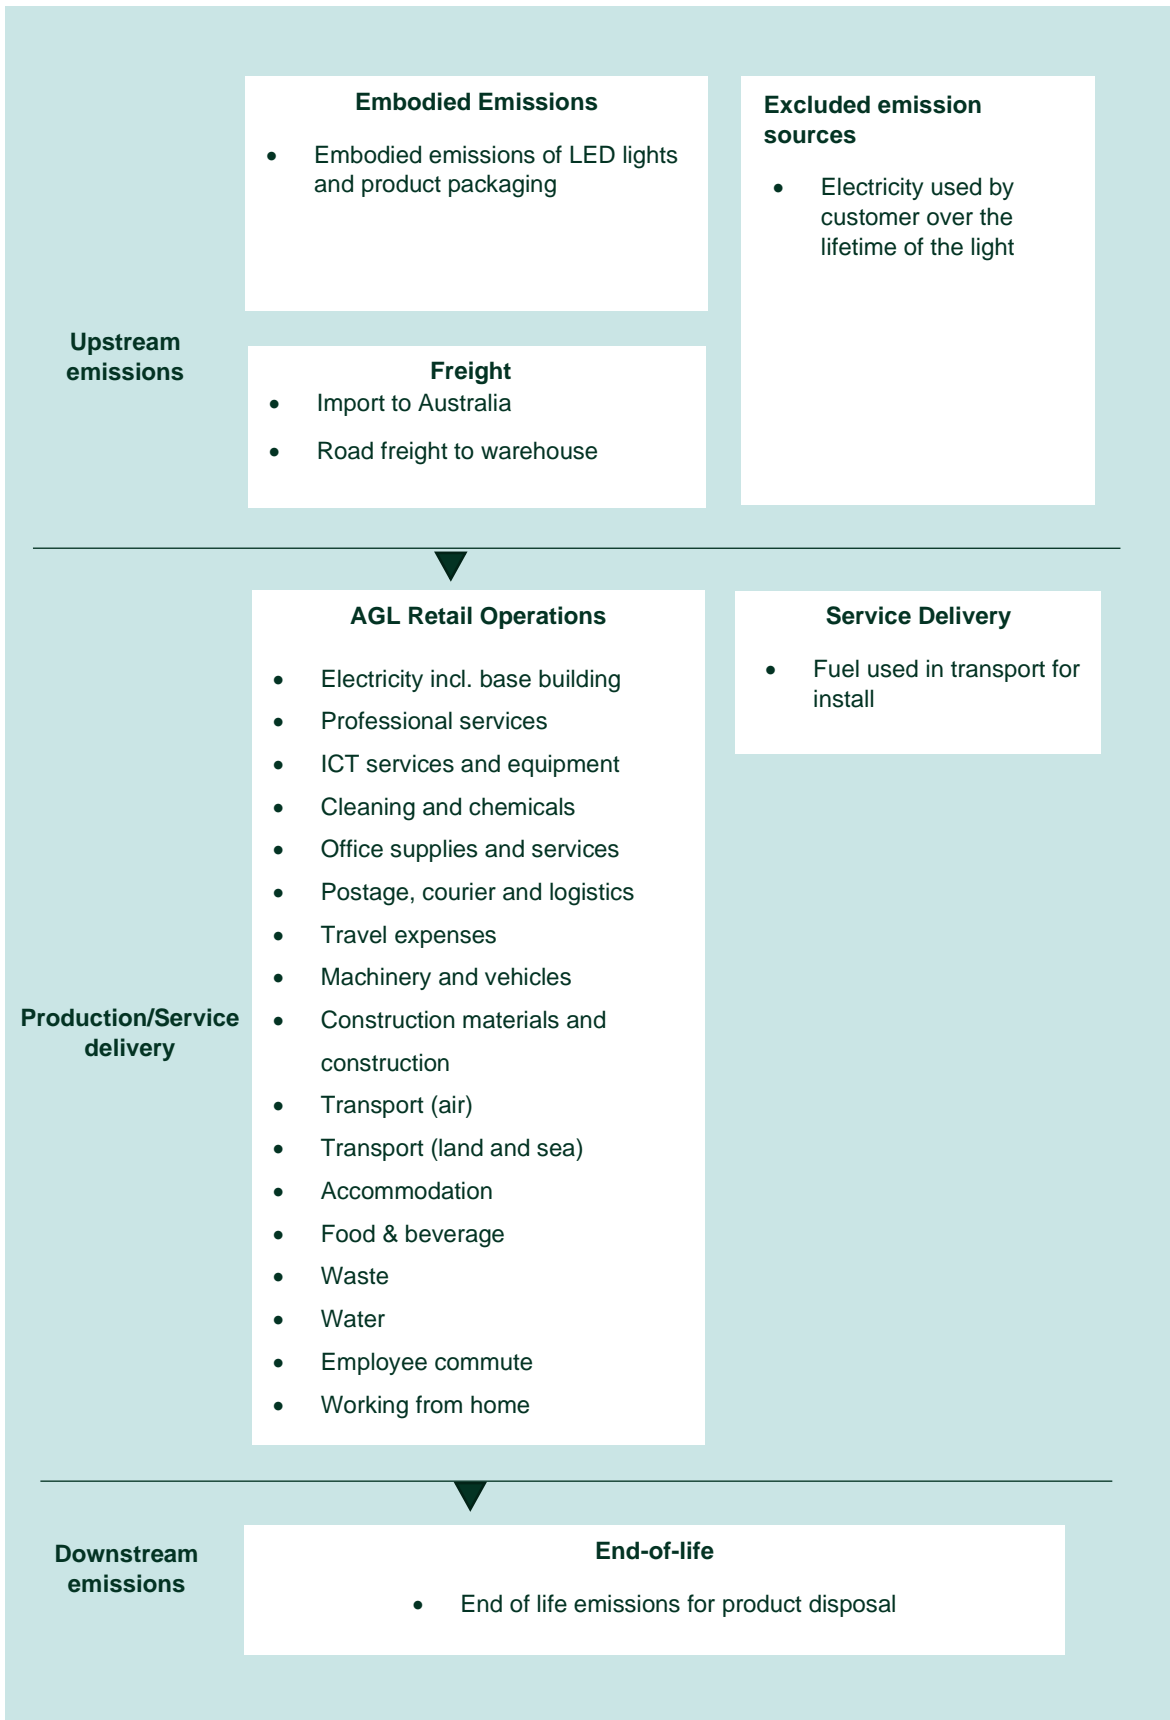

## Outside emission boundary

### Non-attributable

Electricity used by customer over the lifetime of the light

## Product process diagram

The following diagram is cradle to grave.

## 4. EMISSIONS REDUCTIONS

### Emissions reduction strategy

AGL has a strong track record of delivering action on climate change and the energy transition and provide a range of products and services to help our customers decarbonise their businesses and homes.

We have committed, through our Climate Transition Action Plan (**CTAP**), to achieve the following:

- Close Loy Yang A Power Station by the end of FY35<sup>2</sup>. This targeted exit from coal-fired generation, up to a decade earlier than previously announced, would avoid up to 200 MtCO<sub>2</sub>-e of greenhouse gases being emitted compared to the previously planned Loy Yang A Power Station closure date.<sup>3</sup>
- Reduce our annual greenhouse gas emissions by at least 17% compared to a FY19 baseline, from FY24 following the closure of Liddell Power Station in April 2023.<sup>4,5</sup>
- Reduce our annual greenhouse gas emissions by at least 52% compared to a FY19 baseline, by FY35 following the closure of the Bayswater Power Station by 2033.<sup>5,6</sup>
- Be Net Zero for operated Scope 1 and 2 greenhouse gas emissions following the closure of all AGL's coal-fired power stations.
- Develop a decarbonisation pathway to achieve our ambition of being Net Zero for Scope 3 greenhouse gas emissions by 2050.
- Seek to supply our customer demand with ~12 GW of additional renewable and firming capacity, requiring a total investment of up to \$20 billion before 2036.<sup>6</sup> Our initial target is to have up to 5 GW of new renewables and firming capacity in place by 2030, funded from a combination of assets on our balance sheet, offtakes and via partnerships.

Our plan recognises that a balance needs to be struck between responsible transition and rapid decarbonisation, to keep Australia's electricity supply secure, reliable and affordable. We are committed to working constructively with our stakeholders, including government, our people and the communities in which we operate, to lead a responsible and orderly transition.

---

<sup>2</sup> The ability for AGL to execute on this target will be subject to uncertainties and risks, as described on page 12 of AGL's Climate Transition Action Plan.

<sup>3</sup> Maximum emissions avoidance estimated based on maximum annual output from Loy Yang A Power Station over the FY36 - FY46 period.

<sup>4</sup> Operated Scope 1 and 2 greenhouse gas emissions, as reported under the National Greenhouse and Energy Reporting Act 2007, against a FY19 baseline.

<sup>5</sup> FY24 and FY35 represent the first full financial years where no emissions from Liddell and Bayswater power stations occur following the closure of these power stations in April 2023 (FY23) and CY33 (FY34) respectively.

<sup>6</sup> Based on capital cost estimates from AEMO Inputs, Assumptions and Scenarios Workbook, June 2022, adjusted for AGL views where considered appropriate.

## Emissions reduction actions

AGL's operational emissions reduction actions primarily relate to the closure of our coal-fired power stations as outlined in our CTAP released in September 2022.

In April 2023 AGL's Liddell Power Station ceased generation. Decommissioning commenced in FY23. Additionally, as stated in our 2022 CTAP, AGL will develop a decarbonisation pathway to achieve our ambition of being Net Zero for Scope 3 greenhouse gas emissions by 2050.

## 5. EMISSIONS SUMMARY

### Emissions over time

Emissions since base year			
		Total tCO <sub>2</sub> -e	Emissions intensity of the functional unit
Base year:	CY2021	170.02	3.78
Year 2:	CY2022	370.35	3.62
Year 3:	CY2023	0	4.28

\* Please note that there were no carbon neutral sales for Lighting in CY2023

### Significant changes in emissions

Significant changes in emissions			
Attributable process	Previous year emissions (t CO <sub>2</sub> -e)	Current year emissions (t CO <sub>2</sub> -e)	Reason for change
Embodied emissions luminaries (including packaging and end-of-life)	290.86	86.19	Reduction in Watts of lighting installed covered

### Use of Climate Active carbon neutral products, services, buildings or precincts

N/A

## Emissions summary

Lighting is an opt-in carbon neutral product. The below summary represents the entire product/service.

Life cycle stage / Attributable process / Emission source	tCO <sub>2</sub> -e
Embodied emissions luminaires (including packaging and end-of-life)	86.19
Freight (land and sea)	0.44
Installation and maintenance	0.42
AGL retail emissions	6.86
<b>Attributable emissions (tCO<sub>2</sub>-e)</b>	<b>93.90</b>

Product / Service offset liability	
Emissions intensity per functional unit (kgCO <sub>2</sub> -e/Watt installed)	4.28
Emissions intensity per functional unit including uplift factors	N/A
Number of functional units covered by the certification (Watt installed)	0
<b>Total emissions (tCO<sub>2</sub>-e) to be offset</b>	<b>0</b>

## 6. CARBON OFFSETS

### Eligible offsets retirement summary

Type of offset units	Eligible quantity (used for this reporting period)	Percentage of total
N/A		

Project description	Type of offset units	Registry	Date retired	Serial number (and hyperlink to registry transaction record)	Vintage	Stapled quantity	Eligible quantity retired (tCO <sub>2</sub> -e)	Eligible quantity used for previous reporting periods	Eligible quantity banked for future reporting periods	Eligible quantity used for this reporting period	Percentage of total (%)
N/A											
<b>Total offsets retired this report and used in this report</b>										<b>0</b>	
<b>Total offsets retired this report and banked for future reports</b>									<b>0</b>		

### Co-benefits

N/A

## 7. RENEWABLE ENERGY CERTIFICATE (REC) SUMMARY

### Renewable Energy Certificate (REC) Summary

N/A

## APPENDIX A: ADDITIONAL INFORMATION

N/A

## APPENDIX B: ELECTRICITY SUMMARY

N/A

# APPENDIX C: INSIDE EMISSIONS BOUNDARY

## Non-quantified emission sources

The following emissions sources have been assessed as attributable, are captured within the emissions boundary, but are not measured (quantified) in the carbon inventory. These emissions are accounted for through an uplift factor. They have been non-quantified due to one of the following reasons:

1. **Immaterial** <1% for individual items and no more than 5% collectively
2. **Cost effective** Quantification is not cost effective relative to the size of the emission but uplift applied.
3. **Data unavailable** Data is unavailable but uplift applied. A data management plan must be put in place to provide data within 5 years.
4. **Maintenance** Initial emissions non-quantified but repairs and replacements quantified.

Relevant non-quantified emission sources	Justification reason
N/A	

## Excluded emission sources

Attributable emissions sources can be excluded from the carbon inventory, but still considered as part of the emissions boundary if they meet **all three of the below criteria**. An uplift factor may not necessarily be applied.

1. A data gap exists because primary or secondary data cannot be collected (**no actual data**).
2. Extrapolated and proxy data cannot be determined to fill the data gap (**no projected data**).
3. An estimation determines the emissions from the process to be **immaterial**).

Emissions Source	No actual data	No projected data	Immaterial
N/A			

## Data management plan for non-quantified sources

There are no non-quantified sources in the emission boundary that require a data management plan.

## APPENDIX D: OUTSIDE EMISSION BOUNDARY

Non-attributable emissions have been assessed as not attributable to a product or service (do not carry, make or become the product/service) and are therefore not part of the carbon neutral claim. To be deemed attributable, an emission must meet two of the five relevance criteria. Emissions which only meet one condition of the relevance test can be assessed as non-attributable and therefore are outside the carbon neutral claim. Non-attributable emissions are detailed below.

1. **Size** The emissions from a particular source are likely to be large relative to other attributable emissions.
2. **Influence** The responsible entity could influence emissions reduction from a particular source.
3. **Risk** The emissions from a particular source contribute to the responsible entity's greenhouse gas risk exposure.
4. **Stakeholders** The emissions from a particular source are deemed relevant by key stakeholders.
5. **Outsourcing** The emissions are from outsourced activities that were previously undertaken by the responsible entity or from outsourced activities that are typically undertaken within the boundary for comparable products or services.

## Non-attributable emissions sources summary

Emission sources tested for relevance	Size	Influence	Risk	Stakeholders	Outsourcing	Justification
Electricity used by customer over the lifetime of the light	Y	N	N	N	N	<p><b>Size:</b> These emissions are likely to be significant, however as the application and usage of the product varies, there is no accurate way to estimate the contribution of these emissions.</p> <p><b>Influence:</b> We do not have the potential to influence the emissions from this source, including by shifting to a different lower-emissions supplier for our product as it is entirely dependant on the customer's intended use of the product and the electricity that they choose to purchase.</p> <p><b>Risk:</b> There are no relevant laws or regulations that apply to limit emissions specifically from this source, the source does not create supply chain risks, and it is unlikely to be of significant public interest.</p> <p><b>Stakeholders:</b> Key stakeholders, including the public, are unlikely to consider this a relevant source of emissions for our product/service.</p> <p><b>Outsourcing:</b> We have not previously undertaken this activity within our emissions boundary and comparable products/services do not typically undertake this activity within their boundary.</p>

An Australian Government Initiative
